

RAWDATA PROCESSING AND DATA IMPORT

This document explains where files and source code can be found that handle the processing of raw data and the import of processed data into the system.

FILES

All used raw data is stored in the folder `externalMaterial\rawdata`.

A program generating the single votes based on the aggregated voting information and scripts used to import data are stored as `.cs` files in the folder `DataImport`. In addition, the `.csv` files that were used to get the necessary information from are stored in `DataImport\DB_dataimportfile`.
